

Turn-Key Private Cloud Computing Solution

Private turn-key gCLOUD3 offers a fully functional IT environment for a business office enabling deployment of virtual servers, virtual desktops, virtual firewall/router, and SAN storage with its offering gPLATFORM. The gPLATFORM effectively combines advanced technologies such as golden images, server virtualization, desktop virtualization, and consolidated storage to provide a utility computing platform for businesses at an affordable price.

The gPLATFORM has a solution lineup offering a unique opportunity for managed service providers and I.T. companies to stay relevant in the SMB market while building their business in the private cloud computing space.

gCLOUD3's gPLATFORM offering is available with 3 parts to the complete solution:

gVIRTUAL - A private cloud computing solution deployed at a client site or at the resellers datacenter. A complete private cloud, housing the virtual desktops, virtual servers, and complete VDI offering.

gBACKUP+ – A complete backup solution used with the gVIRTUAL that provides for complete backup, disaster recovery, router, and content filtering of the entire private cloud infrastructure.

gMGMT – Management system that holds all ISOs, templates, and software necessary for maintaining the gPLATFORM.

gCLIENT – Thin client line that provides a seamless integration into the private cloud platform. Software based thin client allow for the recycling of existing PCs, without needing to purchase thin clients. Hardware thin clients are also offered that use less than 13 watts of power, no moving parts, and can last 2-3X longer than regular PCs.

gPLATFORM allows for the streamlining of a business's technology to create a standardized platform to cut down labor costs, increase efficiency, and ensure increased productivity.
